

Placement Cell AI-Use Policy

Institution: College Placement Cell | Effective: AY 2025–26 | Author: Sudheer Mangam

Student-AI Scenario Risk Classification (EU AI Act Tiers)

#	Scenario	Tier	Reasoning
1	AI résumé editing	Limited	Student's substance is theirs; AI polish is allowed with recruiter disclosure.
2	AI mock interviews	Minimal	Personal practice tool; no recruiter or third party is affected.
3	AI-written application essays	High-risk	Essays assess the student's own voice; allowed only with mentor review + student declaration.
4	AI-coded GitHub portfolio	High-risk	Allowed only if the student can defend every line in a mandatory oral walkthrough.
5	AI in graded internal assignments	Unacceptable (ability tests) / Limited (application tests with declaration)	Depends on whether the assignment tests skill acquisition or applied thinking.
6	AI-generated CGPA on résumé	Unacceptable	Falsification of an academic record. Banned outright.
7	AI-cloned voice for video interview	Unacceptable	Identity fabrication in a selection process. Banned outright.
8	AI for skills self-assessment	Minimal	Private self-reflection tool; no external party is misled.

Permitted Uses

1. AI may be used to rewrite résumé bullets for clarity and grammar, provided the student discloses AI assistance to recruiters when asked.
2. AI may be used to simulate mock interview practice (e.g., ChatGPT role-play) with no restrictions.
3. AI may be used to explain technical concepts (DSA, OS, DBMS) in personal study mode.
4. AI may be used to generate placement-prep study schedules from a provided syllabus.

5. AI may be used to draft company-research briefs, provided the student verifies every claim against the company's official website before use.
6. AI may be used to review and suggest improvements to student-written code, provided the student can walk through all accepted changes during an oral defence.

Prohibited Uses

1. AI may NOT be used to fabricate projects, internships, or experience the student did not complete. *Detection:* Mentor oral defence — student must explain technical decisions and walk through code in any listed project.
2. AI may NOT be used to clone the student's voice for asynchronous video interviews. *Detection:* Coordinate with recruiters who use live verification segments; flag pre-recorded submissions for spot-check comparison.
3. AI may NOT be used to generate or alter academic records (CGPA, marks, transcripts). *Detection:* Cross-reference all CGPA and marks claims with the college academic portal before submission.
4. AI may NOT be used to write Statements of Purpose, motivation letters, or any essay where the student's authentic voice is the assessment criterion. *Detection:* Mentor compares the submitted essay against 2–3 historical writing samples from the student for voice consistency.

Enforcement

The placement cell will conduct random oral defences on portfolio projects, sampling approximately 20% of students proceeding to final placement rounds; any student unable to defend listed work will have that item removed from their profile before recruiter submission. Policy violations carry the following consequences: first violation — written warning and portfolio re-defence within 7 days; second violation — placement cell support withdrawn for the current recruitment cycle. The placement cell acknowledges that not all AI use is detectable; this policy therefore relies in part on student integrity and on students' own understanding that misrepresentation discovered by a recruiter ends a candidacy permanently.
